## RING SIZE GUIDE

To use this guide correctly you MUST ensure your printer is set to 100% and you have not reduced the page size in 'page set up' nor selected 'fit to page'.

Getting the right ring size can be tricky, visiting a local jeweller is always best but if this isn't possible, here's a guide to help you at home.

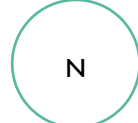

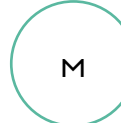

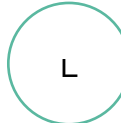

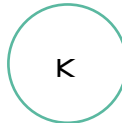

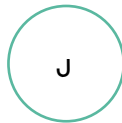

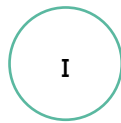

If you do get the wrong size I am happy to exchange or refund on return of the ring, although the customer will cover additional postage costs.

### OPTION 1

Using an existing ring for the finger that you are sizing for, place it on the circles below to find out your perfect size.

- The right size will be when the INSIDE of the ring aligns with a specific circle.
- If your ring sits between two of the circles, then please opt for the bigger size.
- If you are sizing for a ring with a wide band (for example a triple stacking ring) you will probably need to buy a ring 1/2 to 1 full size bigger.

## RING SIZE GUIDE

### OPTION 2

Here is a second option to measure your finger rather than measuring an existing ring.

- Cut around the sizer and make a slit where shown.
- Make a loose circle with the sizer by threading the end through the slit, then place on the finger to be measured and tighten.
- To get an accurate size it's best to measure your fingers when they are not cold.
